

Masterful Blends of Design and Engineering.

## Specifications

The Reference chair series presents a selection of ergonomic task chairs for use by librarians at desks and by patrons at computer and typing stations. The chairs have a stable, 5-prong base, and feature three adjustments: back tilt, back height, and seat height. The chair frame and telescoping base are clad in impact-resistant black plastic; the seat and back offer a comfortable cushion of polyurethane foam and they can be upholstered in any Worden fabric or COM. The chair is available in standard or high bases; the high base features a chromed footring. Both versions are offered with or without cushioned arms.
